LEED Rating	

####

1. Bike racks are being provided both at the base of the design site for students who ride their bikes down the accessible path, as well as at the top of the accessible path for students who leave their bikes there.
2. Ample recycling and trash cans are provided around the site, including around the covered pad, at the top of the hill, and within the hedge maze.
3. Since this is an entirely outdoor facility, efficient electricity usage is only needed for the new lights being installed (as well as charging stations). All the lights will be modern-designed and powered using efficient LED bulbs. There are no AC or heating systems.
4. Micromobility charging stations are to be installed and are designed to be renewable.
5. Bushes and pad materials will be purchased from local gardeners, the two main required materials.
6. As it is a hedge maze, the hedges should fit into the design quality of UVA and act as similar plants to those seen in the Pavilions around the Lawn.
7. The carbon footprint will be reduced, as many bushes and plants are being installed which will absorb CO2 from the atmosphere.
8. An automatic sprinkler system will water the hedges, reducing the human maintenance to virtually zero as there are no other major required maintances.
